

**Q207 Physical and Chemical Test Reports  
Identified to Specific Lots**

**Effective Date: 09/06/2019**

When the applicable specifications establish requirements for chemical and/or physical properties, test reports for each lot must be provided along with the packing sheet. These test reports or copies thereof must provide quantitative evidence that the material(s) shipped meet all the chemical and/or physical properties required by applicable specifications. Test Reports must also provide the following information:

- Manufacturer's Name
- Specification No., Rev. Change and Date
- Lot Number

If the supplied material is aluminum, brass or copper, it is not necessary to report chemical analysis results provided the chemical properties are certified to be within the limits of the applicable specifications. However, physical properties must be reported.

This document is an integral part of the contract (purchase order) in which referenced.  
**Applicable Revision:** The revision in effect at the time the purchase order is placed.
